"The first comprehensive book to cover both raw and home-cooked diets specifically for dogs, written by an expert in dog food research and development"--Provided by publisher.

On July 19, 1916, 7000 Australian soldiers--in the first major action of the AIF on the Western Front--attacked entrenched German positions at Fromelles in northern France. By the next day, there were more than 5500 casualties, including nearly 2000 dead--a bloodbath that the Australian War Memorial describes as "the worst 24 hours in Australia's entire history." Just days later, three Australian Divisions attacked German positions at nearby Pozières, and over the next six weeks they suffered another 23,000 casualties. Of that bitter battle, the great Australian war correspondent Charles Bean would write, "The

field of Pozieres is more consecrated by Australian fighting and more hallowed by Australian blood than any field which has ever existed . . ." Yet the sad truth is that, nearly a century on from those battles, Australians know only a fraction of what occurred. This book brings the battles back to life and puts the reader in the moment, illustrating both the heroism displayed and the insanity of the British plan. With his extraordinary vigor and commitment to research, Peter FitzSimons shows why this is a story about which all Australians can be proud. And angry. If you wouldn't eat processed food, why feed it to your dog? From the acclaimed "Dog Food Dude," comes a revised and updated edition of his essential nutrition book for dogs. Raw feeding is becoming more mainstream as pet owners are looking for a healthy alternative to kibble and canned pet food. "This textbook surveys the techniques, methods, and theoretical frameworks of contemporary prehistoric archaeology. In our presentation we view prehistoric archaeology as an integral part of the larger field of anthropology, conditioned by the historical development, concepts and goals of its parent discipline. While we treat the evolving perspectives of archaeological method and theory, together with their implications for understanding the prehistoric past, the text is not a manifesto for any single doctrine or 'school' within the field. Rather, it seeks to synthesize those aspects of both the 'traditional' and the 'new' archaeology that have contributed significantly to the current status of prehistoric archaeology."--p. ix.

friends has a champion for the cause in Tom Lonsdale. A veterinarian for more than 30 years, he was slow to convert to the philosophy of a natural diet for dogs. But some 15 years ago he paid attention to the red flags he saw in his veterinary practice concerning the incident rate of cancer, skin irritations, gum disease and more. His research led him to the conclusion that the commonly used highly processed dog food was the main culprit. A diet of raw food with selected vegetable was the answer and the results spoke for themselves when he witnessed the improvement in his canine patient's health after making the switch. His book is a clear endorsement of a raw diet and is aimed at pet wonders who are interested in wanting to learn more than the basic information on this dietary plan. He tell the history of how the raw diet evolved and in the process discusses the current canned and dried foods available. Lonsdale goes into detail on what is actually included in processed dog food. This is a technical book, which covers a great deal of material and refers to a variety of studies and their findings. Feeding Dogs Dry Or Raw? The Science Behind The Debate

***In this new century mankind faces ever more challenging environmental and public health problems, such as pollution, invasion by exotic species, the emergence of new diseases or the emergence of diseases into new regions (West Nile virus, SARS, Anthrax, etc.), and the resurgence of existing diseases (influenza, malaria, TB, HIV/AIDS, etc.). Mathematical models have been successfully used to study many biological, epidemiological and medical problems, and nonlinear and complex dynamics***

*have been observed in all of those contexts. Mathematical studies have helped us not only to better understand these problems but also to find solutions in some cases, such as the prediction and control of SARS outbreaks, understanding HIV infection, and the investigation of antibiotic-resistant infections in hospitals.*

*Structured population models distinguish individuals from one another according to characteristics such as age, size, location, status, and movement, to determine the birth, growth and death rates, interaction with each other and with environment, infectivity, etc. The goal of structured population models is to understand how these characteristics affect the dynamics of these models and thus the outcomes and consequences of the biological and epidemiological processes. There is a very large and growing body of literature on these topics. This book deals with the recent and important advances in the study of structured population models in biology and epidemiology. There are six chapters in this book, written by leading researchers in these areas.*

*Although he published relatively little in his lifetime, Harvey Sacks's lectures and papers were influential in sociology and sociolinguistics and played a major role in the development of ethnomethodology and conversation analysis. The recent publication of Sacks's "Lectures on Conversation" has provided an opportunity for a wide-ranging reassessment of his contribution.*

*The commercial pet food industry has a secret to hide -- and Ann Martin wants to make sure you know it. Her research reveals some startling facts: that the pet food industry conducts animal testing in order to improve their product, and includes euthanized cats*

***and dogs in the mix to heighten protein content. In this revised and updated edition, Martin continues to explore the shocking processes by which commercial pet foods are produced. She offers alternative recipes for feeding pets, nutritional advice, and an exploration of "Pet Peeves," in which she explores several scams aimed at pet owners. This groundbreaking book gives us a glimpse into exactly what we are doing when we buy pet food.***

***A big, inside look at the shocking lack of regulation within the pet food industry, and how readers can dramatically improve the quality of their dogs' lives through diet. What's really going into commercial dog food? The answer is horrifying. Big Kibble is big business: \$75 billion globally. A handful of multi-national corporations dominate the industry and together own as many as 80% of all brands. This comes as a surprise to most people, but what's even more shocking is how lax the regulations and guidelines are around these products. The guidelines—or lack thereof—for pet food allow producers to include ever-cheaper ingredients, and create ever-larger earnings. For example, "legal" ingredients in kibble include poultry feces, saw dust, expired food, and diseased meat, among other horrors. Many vets still don't know that kibble is not the best food for dogs because Big Kibble funds the nutrition research. So far, these corporations have been able to cut corners and still market and promote feed-grade food as if it were healthful and beneficial—until now. Just as you are what you eat, so is your dog. Once you stop feeding your dog the junk that's in kibble or cans, you have taken the first steps to improving your dog's health, behavior and happiness.
