French women didn't invent happiness. But they know a thing or two about joie de vivre—being alive to each delicious moment. As a young girl, Jamie Cat Callan was fascinated by her French grandmother. Though she had little money, Jamie's grand-mère ate well, dressed well, and took joy in simple, everyday pleasures. As Jamie journeyed through France as an adult, she gained more insight into the differences between French and American women. French women—whether doctors, shop owners, or housewives—don't worry about being thin enough, young enough, or accomplished enough. They age gracefully and celebrate their bodies. They know how to balance their lives—to love food without overeating, to work hard but not too much, to relish friends and family, and still make time for themselves. Now Jamie draws on everything French women have taught her and shows you how to: Buy and consume less—and enjoy more Look like a million Euros on a few francs Find time to be alone Flirt à la française Rediscover your own mystery Perfection isn't attainable, but happiness always is. And this uplifting, revelatory book shows every woman how to embrace it—and savor it.

The intimate biography of the celebrated actor Richard Harris, written with his cooperation over ten years by New York Times bestselling author and friend of Harris, Michael Feeney Callan. The book follows Harris' life from humble beginnings in Limerick, Ireland, through the teenage illness that almost killed him to triumph on the London stage and, finally, life in Hollywood. Drawing on lengthy interview sessions with Harris and his friends, co-workers and family, Callan explores the obsessions that forged Harris' success in legendary movies like This Sporting Life, Camelot and the megahit Harry Potter series. Described by The Guardian as "thorough and entertaining", by Kirkus Reviews as "meticulous" and by the Mail on Sunday as "irresistible" this incident-packed account is destined to remain the definitive life of Richard Harris. The author of Bonjour, Happiness! offers a revealing foray into French femininity with beauty and style secrets from the women of Paris and beyond. French women seem to have a special knack for life's most important things—food, love, raising children. And in matters of beauty and style, they appear to be at an unfair advantage. But the truth is that French women are not born more attractive than anyone else—and everything they know can be learned. French women learn at a young age how to feel beautiful, confident, and sexy, inside and out. It's an allure that outlasts youth—in fact, some of France's most celebrated women are femmes d'un certain âge. Growing up, Jamie Cat Callan had a French grand-mère to instruct her on style, grooming, and genuinely liking her reflection in the mirror. Now she shares that wisdom along with advice from other French women on fragrance, image consulting, makeup, and more. "This charming foray into French femininity will make a perfect cadeau for any Francophile lady." —Publishers Weekly

The Seasons of Callan Reed: An Enemies-to-Lovers Office Romance Synopsis and cover coming soon. Callan Slipper offers five ways for Christians to approach one another on the path toward unity. For as long as Christian churches and communities have been divided, there are those who have looked for ways to heal the fractures. Callan Slipper offers five ways for Christians to approach one another on the path toward unity. (1) Recognize the need; (2) Start from being united; (3) Proceed one person at a time, with love; (4) Don't make yourself the architect of truth. Truth is Jesus; (5) embrace the cross, and let Jesus' love transform division. His observations come from years of experience with ecumenists, and his optimism that unity is inevitable is evidence that faith and hope undergird the challenges that abide our daily choice to build Christian unity by the way we love one another.

A Treatise on the Law of Evidence

Second South Asia Edition

The book is an edited volume of different perspectives on the South Asian region and captures the political, social and economic challenges facing the region following the financial crisis and the region's responses to these challenges.

Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

This volume is a collection of lectures and selected papers by Giorgio Parisi on the subjects of Field Theory (perturbative expansions, nonperturbative phenomena and phase transitions), Disordered Systems (mainly spin glasses) and Computer Simulations (lattice gauge theories). The basic problems discussed in the Field Theory section concern the interplay between perturbation theory and nonperturbative phenomena which are present when one deals with infrared or ultraviolet divergences or with nonconvergent perturbative expansions. The section on Disordered Systems contains a complete discussion about the replica method and its probabilistic interpretation, and also includes a short paper on multifractals. In the Simulations section, there is a series of lectures devoted to the study of quantum chromodynamics and a review paper on simulations in complex systems. The works of Giorgio Parisi have repeatedly displayed a remarkable depth of originality and innovation, and have paved the way for new research in many areas. This personal selection of his lectures and papers, complete with an original introduction by him, undoubtedly serves as a vital reference book for physicists and mathematicians working in these fields.

This selection of Parisi's work ... touches upon many aspects of modern theoretical physics." "This book is a wonderful illustration of the unity and of the power of theoretical concepts in the hands of an amazingly imaginative physicist with universal interests. Very often one hears complaints about the hyperspecialization of modern science; indeed to make progress on a definite topic requires a good specialized background, but it does not prevent scientists with such a wide angle inquisitive mind to understand and contribute significantly to so many different areas. Fermi, Feynman, Landau were like that in their time; similarly Parisi has been illustrating over the last twenty years how much field theory, scaling, universality, complex systems, disordered systems ... were powerful ways of looking at science. This collection of reprints contains a good illustration of this theme, with some articles which are not readily available in standard journals, and it is thus a pleasure to welcome this new addition to the modern standard bearer of a distinguished school of universal theorists which can be traced back to Fermi and Landau. This is not only due to the importance and originality of his scientific contributions but also for his efforts to disseminate what is known at the frontiers of knowledge to a larger audience of young physicists." "The breadth of coverage imparts a deep understanding of stochastic phenomena, field theory and disordered systems and their interrelations..." "... a must for anyone seriously interested in field theory or the theory of disordered systems." Physics World "Parisi, whose work spans a wide range of theoretical physics, was awarded the Boltzmann Medal in 1992 and his selection of lectures and papers will form a valuable reference for theorists working in these areas." Contemporary Physics "This book contains some of the best lectures of Giorgio Parisi, given over the last 20 years at several schools and conferences (mainly Cargèse and Les Houches), together with some research papers that are meant to complement them. The works have been selected by Parisi, who completes the book with an original introduction in which he gives reasons for the choices ... a very useful collection of material by one of the most outstanding physicists of his generation. The reader will enjoy the book and learn many things, even if already acquainted with the work of the author." Mathematical Reviews

It's a time when the growing threat of fascism in Europe is a constant worry, and people escape from reality through radio and the movies. Meanwhile, the two sisters -- vastly different in personality, yet inextricably linked by a shared past -- try to find their places within the complex web of social expectations for young women in the 1930s. While Nora embarks on a glamorous career as a radio-soap opera strong and independent-minded woman, struggles to observe the traditional boundaries of a small and tight-knit community without relinquishing her dreams of love, freedom, and adventure. However, things aren't as simple as they appear -- Nora's letters eventually reveal life in the big city is less exotic than it seems, and the tranquil solitude of Clara's life is shattered by a series of unforeseeable events. These twists of fate require all of Clara's courage and strength, and finally put the seemingly unbreakable bond between the sisters to the test.
