Just like today, with high-specification computers being used to design even higher specification models for the next generation, the making of machines to make machines was one of the most important aspects of the Industrial Revolution. The lathe, for example, is the oldest known machine tool and

dates back to antiquity, but it wasn't until the late 17th century that such industries as clock making, the building of scientific instruments, furniture and gun makers, began to convert from woodworking lathes to ones that were capable of machining metal. Craftsmen needed precise machines that could shape metal gears, cut metal screws and stamp shapes out of metal, thus enabling others to assemble their products.

Between soaring mountains, across arid deserts, parched plains and valleys of fruit orchards and olive groves, down glittering coastlines and along viaducts towering above plunging ravines... there is no better way to see Spain than by train. Rail enthusiast Tom Chesshyre, author of *Slow Trains to Venice*, *Ticket to Ride* and *Tales from the Fast Trains*, hits the tracks once again to take in the country through carriage windows on a series of clattering rides beyond the popular image of "holiday Spain" (although he stops by in Benidorm and Torremolinos too). From hidden spots in Catalonia, through the plains of Aragon and across the north coast to Santiago de Compostela, Chesshyre continues his journey via Madrid, the wilds of

collection of various pieces of machinery from the last 150 years. The various sections deal with some eminent scientists of the past, with the history of industrial installations, machinery and transport, with the human inventiveness for mechanical and scientific devices, and with robots and human-driven automata. All chapters have been written by experts in their fields. The volume shows a wide-ranging panorama on the historical progress of scientific and technical knowledge in the past centuries. It will stimulate new research and ideas for those involved in the history of Science and Technology.

In Great Britain there existed a practice of naming steam railway locomotives. The names chosen covered many and varied subjects, however a large number of those represented direct links with military personnel, regiments, squadrons, naval vessels, aircraft, battles and associated historic events. Memorably the Southern Railway (SR) created a Battle of Britain class of Light Pacific locomotives, which were named in recognition of Battle of Britain squadrons, airfields, aircraft and personnel. The Great Western Railway (GWR) renamed some of its express passenger Castle Class engines after Second World War

aircraft. Names were displayed in varying styles on both sides of the locomotives, additionally some nameplates were adorned with ornate crests and badges. Long after the demise of mainline steam, rescued nameplates are still much sort after collectors' items, which when offered for sale command high prices. This generously illustrated publication highlights the relevant steam locomotives at work and explains the origins of the military names.

Britain was the first nation to transition to industry based on fossil fuels, which put its novelists and other writers in the remarkable position of mediating the emergence of extraction-based life. Miller looks at works like Hard Times, The Mill on the Floss, and Sons and Lovers, showing how the provincial realist novel's longstanding reliance on marriage and inheritance plots transforms against the backdrop of exhaustion to
