In this lavishly illustrated book, readers will discover everything there is to know about wrapping gifts easily, neatly, and with a touch of panache. Creative Gift Wrapping makes it easy to tackle gifts of all sizes, from a tiny box for jewelry to an oversized just-what-they-wanted surprise, and provides suggestions for alternate containers like baskets, tins, and decorated bags for odd-shaped items. The heart of the book is a gallery of perfect wrappings for weddings, birthdays, Mother's and Father's day, Christmas, and other special days throughout the year. Organized by occasion, this book has step-by-step illustrated instructions for making the wrapping and adding the finishing touches. The ideas include spray-painted paper with gilded decorations, decoupage with matching tags and envelopes, stenciling paper topped with paper roses and leaves, and pierced paper tied with delicate net ribbon. An illustrated directory shows how to mix and match the various techniques. Plus, a selection of templates at the back of the book enables the reader to create the designs of his or her choice.

**The new field of cryptographic currencies and consensus ledgers, commonly referred to as blockchains, is receiving increasing interest from various different communities. These communities are very diverse and amongst others include: technical enthusiasts, activist groups, researchers from various disciplines, start ups, large enterprises, public**

authorities, banks, financial regulators, business men, investors, and also criminals. The scientific community adapted relatively slowly to this emerging and fast-moving field of cryptographic currencies and consensus ledgers. This was one reason that, for quite a while, the only resources available have been the Bitcoin source code, blog and forum posts, mailing lists, and other online publications. Also the original Bitcoin paper which initiated the hype was published online without any prior peer review. Following the original publication spirit of the Bitcoin paper, a lot of innovation in this field has repeatedly come from the community itself in the form of online publications and online conversations instead of established peer-reviewed scientific publishing. On the one side, this spirit of fast free software development, combined with the business aspects of cryptographic currencies, as well as the interests of today's time-to-market focused industry, produced a flood of publications, whitepapers, and prototypes. On the other side, this has led to deficits in systematization and a gap between practice and the theoretical understanding of this new field. This book aims to further close this gap and presents a well-structured overview of this broad field from a technical viewpoint. The archetype for modern cryptographic currencies and consensus ledgers is Bitcoin and its underlying Nakamoto consensus. Therefore we describe the inner workings of this protocol in great detail and discuss its relations to other derived systems.
